Session: Use of Pointers In C++ Programs

Quick Recap of Relevant Topics

- Basic programming constructs
- Pointer data type in C++
- “Address of” operator in C++
- “Content of” operator in C++
- Caveats when using “address of” and “contents of”

Overview of This Lecture

- Understanding usage of pointers in C++ programs
- Understanding how contents of memory locations change when a program with pointers executes

A C++ Program With Pointers

```
int main()
{ int m, n;
  int * ptrInt;
  int ** ptrPtrInt;
  ptrPtrInt = &ptrInt;
  cout << "Give m and n: "; cin >> m >> n;
  ptrInt = &n; cout << *(*ptrPtrInt) << endl;
  ptrInt = &m; cout << *(*ptrPtrInt) << endl;
  return 0;
}
```

**If we give input values of 5 and 6
for m and n, what does the program output?**

A C++ Program With Pointers

```
int main()
{ int m, n;
  int * ptrInt;
  int ** ptrPtrInt;
  ptrPtrInt = &ptrInt;
  cout << "Give m and n: "; cin >> m >> n;
  ptrInt = &n; cout << *(*ptrPtrInt) << endl;
  ptrInt = &m; cout << *(*ptrPtrInt) << endl;
  return 0;
}
```

A C++ Program With Pointers

```
int main()
{ int m, n;
  int * ptrInt;
  int ** ptrPtrInt;
  ptrPtrInt = &ptrInt;
  cout << "Give m and n: "; cin >> m >> n;
  ptrInt = &n; cout << *(*ptrPtrInt) << endl;
  ptrInt = &m; cout << *(*ptrPtrInt) << endl;
  return 0;
}
```

A C++ Program With Pointers

```
int main()

Memory Update using “*” Operator

- So far, we’ve used expressions like “* ptrA” to **read** the contents of memory at address given by ptrA
- We can also use “* ptrA” to **write** the contents of memory at address given by ptrA

`*ptrA = b + c;`

stores the value of expression “b + c” as the new content of memory at address given by ptrA

Another C++ Program With Pointers

```
int main()
{ int m, n, sum = 0;
  int * ptrInt;
  int * ptrSum;
  ptrSum = &sum;
  cout << "Give m and n: "; cin >> m >> n;
  ptrInt = &n; *ptrSum += *ptrInt;
  ptrInt = &m; *ptrSum += *ptrInt;
  cout << "Sum: " << sum << endl;
  return 0;
}
```

**If we give values of 5 and 6 for m and n,
what does the program output?**

Another C++ Program With Pointers

```
int main()
{ int m, n, sum = 0;
  int * ptrInt;
  int * ptrSum;
  ptrSum = &sum;
  cout << "Give m and n: "; cin >> m >> n;

Summary

- Use of “address of” and “content of” operators in C++
 - Unary & and unary * operators
- Understanding how contents of memory locations change when executing programs with pointers
- Using “content of” operator to update memory locations
